

Kensington Palace.

Gas-fired condensing boilers from MHG Heating have been applied to three systems within the Kensington Palace complex.

The ProCon 77 wall mounted gas condensing units complete flue adapters were installed as direct replacements for the aging MicroMat boilers as part of the palaces carbon reducing program.

As the ProCon 77 is a direct replacement for the MicroMat range, disruption to the Royal Household was kept to an absolute minimum, with each boiler being replaced in less than 1 day.

Following the successful application of MHG boilers to St James Palace the ProCon 77 option was a natural conclusion.

MHG Heating products are being considered for other projects within other Royal properties.
